SOLUTION BRIEF

Signiant + Vultr: Better Together

Merge the Signiant Platform with Vultr's high-performance cloud infrastructure to ensure fast, secure, and reliable global media delivery. Welcome to the future of cloud-based media operations.

The alliance between Signiant and Vultr brings together two major players in their respective industries. With Vultr's robust, globally scalable cloud platform and Signiant's accelerated file transfer solutions, businesses can efficiently deploy, manage, and distribute digital content anywhere in the world.

This partnership ensures high-speed media file transfers, comprehensive end-to-end media workflow management, and low-latency media delivery, making it an ideal solution for businesses in the Media and Entertainment Industry, such as video game studios, creative agencies, or any business dealing with large volumes of digital content.

Reliable file transfer anywhere and everywhere

Combine Signiant's secure media delivery platform with Vultr's global cloud infrastructure to efficiently deploy, transfer, and manage your digital content at a competitive price.

Reliable data transfer

This partnership enables secure and easy content exchange with global partners. The Signiant Platform allows businesses to securely exchange content throughout the media ecosystem, supported by Vultr's global infrastructure.

Global delivery

With Vultr's 32+ global cloud data centers, you can ensure fast and secure delivery of your digital content to any part of the world.

Challenge: Optimizing bandwidth usage

Bandwidth can be expensive

Unlock a distinct advantage in bandwidth control and cost savings through accelerated and efficient file transfer technology and the use of Vultr's scalable cloud infrastructure.

Struggles with latency and data loss

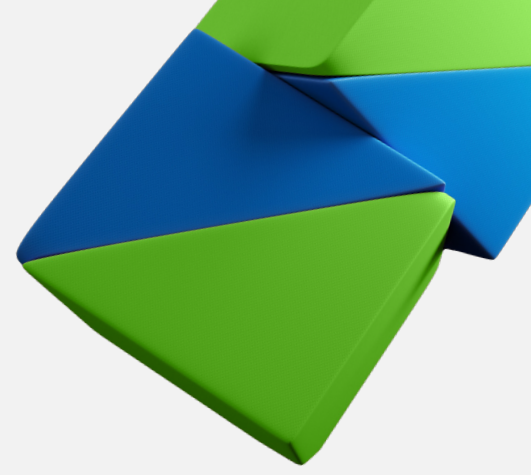

Transfer large media files quickly and securely across any IP network using Signiant's patented transport and acceleration technology.

Cumbersome file management

With the integration of Signiant and Vultr, implement an end-to-end media workflow that seamlessly distributes your media files across different platforms.

Outdated transfer methods

Ensure reliable access to media assets for your globally dispersed teams and ditch the outdated transfer methods slowing down operations.

Imagine plugging into a single platform that unites the global media ecosystem.

An integrated set of SaaS-based products that make content flow more efficient. The essential foundation for any modern media factory.

The Signiant + Vultr Difference

Optimize your operation

Accelerated file transfer capabilities and robust cloud infrastructure significantly reduce the time spent managing and transferring large files, saving hundreds of hours and increasing productivity.

Monitor file transfers in real-time

Access tools and dashboards for real-time monitoring and reporting. This can be particularly useful in media environments for tracking file transfers, data usage, job statuses, and more.

Optimized user experiences

From the initial setup, operation, and management, users can leverage easy-to-use platforms to manage their entire media lifecycle and cloud infrastructure.

Key Advantages

Scale without compromise

Automate, set access control, and share files of any size worldwide with confidence at speeds 100x faster than traditional methods.

Secure and compliant

By providing built-in security features, such as firewalls and SSL/TLS encryption, and adhering to the highest global compliance standards, Vultr and Signiant ensure the safety and integrity of your data.
