Zeet + Vultr: Simplifying Cloud

Enjoy Vultr's affordable cloud computing solution while providing tools to automate infrastructure management and implement developer self-service with Zeet's DevOps platform.

Vultr and Zeet seamlessly collaborate to provide a powerful and streamlined cloud computing experience. With Vultr, you can effortlessly spin up high-performance cloud compute instances and services on the largest independent cloud computing platform available. Offering composable full-stack infrastructure across 32+ global data centers, Vultr ensures unparalleled scalability and reliability. Meanwhile, Zeet steps in to simplify the deployment and management of your infrastructure, eliminating the need to navigate the complexities of hyperscaler cloud providers.

By leveraging the combined strength of Vultr + Zeet, you can enjoy an accelerated time to deploy your applications, optimized performance for your software, and the flexibility of on-demand compute resources. Get happier, more efficient engineers, as Zeet takes care of the heavy lifting, allowing them to focus solely on high value work and driving innovation. Additionally, you can rest assured knowing that Vultr + Zeet's collaboration makes the best of cloud native technologies, including Kubernetes, Serverless, Terraform, Pulumi, and Helm, available to your teams. Experience the convenience and efficiency of a partnership that brings together top-notch cloud infrastructure and simplified deployment, enabling you to maximize your productivity and achieve your development goals with ease.

Best-in-class cloud management plus globally scalable compute

Combine the power of Zeet's Cloud Infrastructure Management with the power of Vultr's Infrastructure-as-a-Service to deploy and scale your application around the globe at an affordable price.

Affordability

This joint partnership offers a compelling alternative to the hyperscalers by delivering solutions that not only offer superior price-to-performance, but also boast predictable billing practices.

Global scale

Customers can leverage the expansive infrastructure of Zeet and Vultr to power their applications and services with high-speed connectivity and low-latency access from virtually anywhere in the world.

Challenge: Launching cloud infrastructure is complex

Cloud requires specialized talent

Vultr allows you to deploy and scale the latest technology so you're not fighting with aging infrastructure, while Zeet provides the tools that simplify the process for deploying software.

Set up can take months

Both Vultr and Zeet provide a simple, intuitive interface that requires very little setup, making it easy to deploy globally in under 60 seconds, automate workflows, and manage users.

Cloud is expensive

Vultr and Zeet eliminate the steep learning curve and mistakes of cloud engineering, while providing utility-based pricing, ensuring cloud costs are affordable and predictable.

The Zeet + Vultr Difference

Composable ecosystem

No need to compromise on flexibility or quality—custom build and scale cloud operations that suit your unique business and budget needs.

Set up anywhere

Vultr + Zeet is available around the globe, allowing you to maintain compliance with data residency and run powerful edge compute instances with low latency.

Plug-n-play

Vultr is an integrated Cloud Partner in the Zeet dashboard. All Zeet customers can deploy workloads to Vultr in a few clicks.
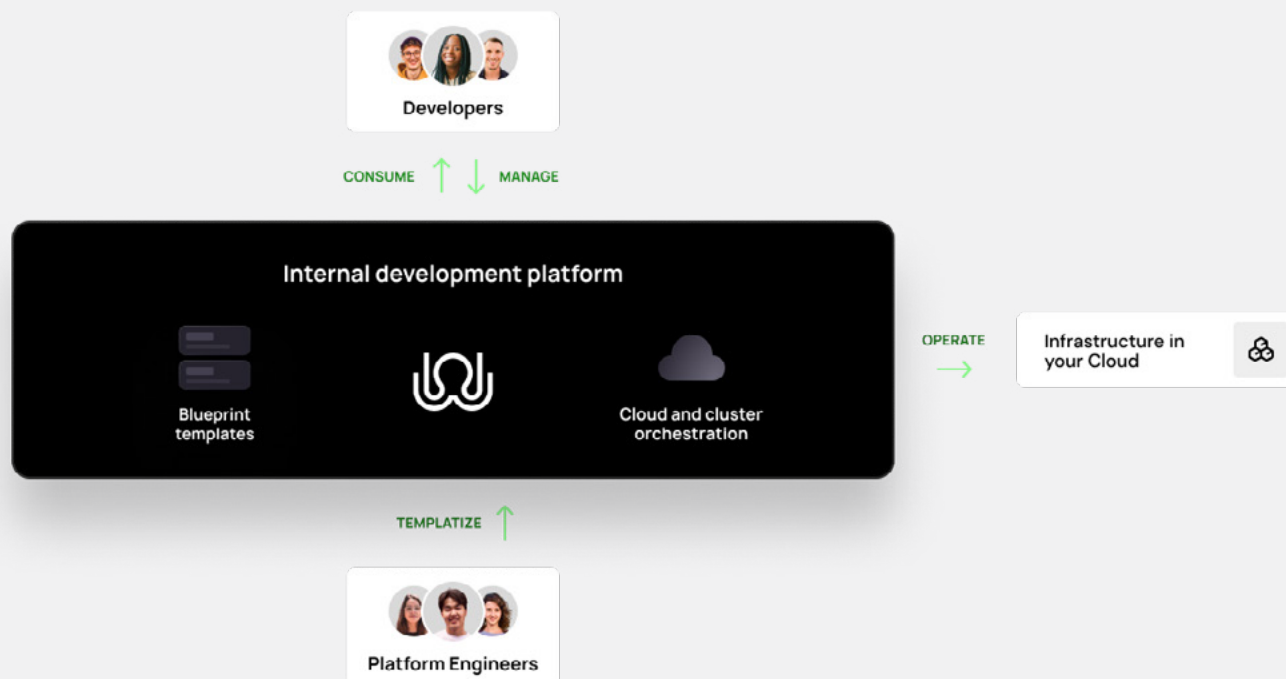

VULTR

Key Advantages

Improve team efficiency

Zeet will handle CD and optimize your cloud resources, so your development teams can build your product without dependencies and deployment hiccups. Vultr allows developers to compose cloud infrastructure on demand from a range of best-in-class full-stack cloud compute and services.

Deploy infrastructure effortlessly

With Vultr + Zeet, there's no need to wade through bloated features or navigate complex configurations before you deploy. Zeet comes configured out of the box, so your internal developer platform (IDP) is production ready on day one, and Vultr lets you spin up instances in one click.

Easily scale globally

Vultr + Zeet is available worldwide. With flexible, scalable access to high-performance cloud compute and storage in 32+ global data centers around the world, you can quickly deploy applications globally while maintaining compliance. Easily scale up or down to suit your workflows and applications and pay only for what you use.

Support for your favorite frameworks

With Zeet, all your favorite languages and frameworks are covered. They work diligently to support whatever language you choose. Additionally, if you bring your own Infrastructure as Code, Zeet can provide the necessary support as well.
